

Internet Law Assignments

Assignment 1

Why do we have to study internet law and learn about Internet?

- Internet is one of the fastest-growing areas of technology.
- ICT is now present in almost every part of life (business, education, government, daily communication).
- Digitalization is increasing (paper → digital, traditional services becoming online).
- Internet affects old legal areas: contracts, crimes, privacy, jurisdiction, intellectual property.
- New crimes and legal problems appear online, so rules are needed to keep society safe and functioning.

How can ICT be a foundation for development in a society?

- Creates and supports network-based services such as mobile money and video calls.
- Changes communication methods, with emails replacing letters and online presence becoming more important.
- Internet calls grow faster than traditional phone services.
- Allows online contract signing with people abroad while remaining in Rwanda.
- Makes business, education, and services faster and cheaper.

How can ICT applications enable development especially in developing countries?

- Delivers basic services to remote and rural areas.
- Enables people to pay taxes, apply for jobs, or study abroad from home.
- Supports development goals such as poverty reduction and improved health.
- Example: use of drones to deliver blood and medicine in Rwanda.

How and why was DARPA created?

- Created after the Soviet Union launched Sputnik in 1957.
- USA feared being technologically behind during the Cold War.
- Government invested heavily in science and military technology.
- DARPA was formed within the Department of Defense.

Mission of DARPA/ARPA

- Ensure US military technology stays ahead of enemies.
- Maintain technological superiority.
- Prevent technological surprise from other countries.

How was the Internet born?

- Developed from Cold War military concerns.
- Needed a decentralized communication system.
- DARPA funded ARPANET.
- In 1983, ARPANET adopted TCP/IP, creating the modern Internet.

What characterizes the information society?

- High use of information in daily life.
- Common technology for social, education, and business activities.
- Fast digital data exchange worldwide.

Assignment 2

What is cyberspace?

- A virtual space created by the Internet.
- Environment for digital communication.
- Has no physical borders.
- Includes computers, networks, software, websites, emails, phones, ATMs, and storage devices.

What does internet law encompass?

- Controls access to cyberspace.
- Regulates service providers and manufacturers.
- Governs user activities.
- Covers privacy, freedom of expression, cybercrime, and jurisdiction.

How do you get access to the Internet?

- Dial-up using a modem and telephone line.
- Broadband via Wi-Fi from a service provider.

What is cybersecurity?

- Tools, policies, and technologies to protect cyber environments.
- Protects systems, networks, and data.

Aim of cybersecurity

- Protect organizational and user assets.
- Reduce cyber risks.

What does cybersecurity include?

- Devices, personnel, infrastructure, applications, and services.
- Telecommunication systems and all digital information.

What is cybercrime?

- Criminal activity involving computers or networks.
- Illegal acts targeting system security or data.

What are computer-related crimes?

- Crimes using computers as tools.
- Examples include hacking, fraud, and electronic counterfeiting.

Assignment 3

How has technology helped create a dynamic world?

- Enabled high-speed data processing.
- Created a borderless digital world.

- Allows instant global communication.
- Drives an information-based society.

Importance of cybersecurity

- Essential for national security and economy.
- Protects online services like banking.
- Supports IT growth.

Requirements for cybersecurity

- National strategies.
- User education.
- Strong technical protection systems.

Implementation of national cybersecurity framework

- Educating users.
- Building technical systems.
- Cooperation between government, private sector, and citizens.

How can cybercrime be hindered?

- Strong national laws.
- Protection of critical infrastructure.
- International cooperation.

International dimension of cybercrime

- Cybercrime crosses borders easily.
- Requires international legal cooperation.
- Needs mutual legal assistance agreements.

Legal challenges in international cooperation

- Slow mutual legal assistance procedures.

- Differences in national laws.
- Old agreements not covering cybercrime adequately.
